

Making Cheshire Safer

Summary of proposals for 2013-14 and beyond

heshire Fire Authority is the public body responsible for ensuring local communities are protected by an effective fire and rescue service.

With budget cuts of up to £5 million expected over the next four years, it has carried out a fundamental review into how its frontline emergency response service could be delivered most effectively in the future.

A comprehensive package of options has been developed which could see more fire stations in Cheshire in the future, with virtually the same number of fire engines but staffed differently than now. The average time it takes to get to life-threatening fires and other emergencies would improve and the Authority would also be able to hit its savings targets.

The options have been developed using information gained from past consultations alongside expert fire service opinion and nationally-recognised fire and rescue computer modelling systems and consultants.

The Authority now wants to understand the views of residents, businesses, partners, staff and other stakeholders about these proposals. This summary document is intended to provide people with sufficient information to understand and be able to comment on the options. The following pages give details about current arrangements and future options, including estimated annual salary savings between £3-5 million. The consultation will influence important decisions around:

- Whether the proposed new stations should be built
- Which of the different options for the future crewing of specific stations should be implemented and when
- Whether the Authority should move from its current emergency response standards to a 10 minute blanket response for incidents where lives are at risk.

The consultation runs from 24th September to 17th December 2012. Please complete the printed survey or the on-line one at www.cheshirefire.gov.uk The full plan and supporting documents are also on the website, e-mail: consultation@cheshirefire.gov.uk or 'phone 01606 868408.

Current Position

Cheshire Fire and Rescue Service currently has 24 community fire stations which are staffed according to local risk and activity levels. There are

- Seven wholetime stations in the main urban areas with crews working day and night shifts to provide 24/7 cover.
- Five day crewing stations in smaller urban areas with firefighters living in Authority-owned houses

- alongside the stations. They are on duty in the day but respond from home through a pager at night.
- Two nucleus crewed stations here firefighters work 12 hour shifts covering the period of peak activity, with "on-call" staff who live within five minutes of the station covering the rest. We are considering increasing this to 6 or 7 minutes to aid recruitment.
- Ten "on-call" stations these are in mainly rural areas, and staff formerly known as retained firefighters who live or work within five minutes of the station are alerted via a pager day and night.

Risk and activity

There have been reductions of over 40% in the number of incidents attended over the last seven years yet the amount of staff involved in responding to emergencies has reduced by 1%. Over the same period the number of fire engines and other response vehicles has increased.

In addition, the Service maintains the same level of emergency response in most areas 24/7 - even though there are major drops in incident numbers at night compared to daytime. The Authority, therefore, intends to better match its resources to reflect the likely risks and activity levels.

Response standards

The Service currently has sophisticated but complex emergency response standards setting out how quickly fire engines aim to get to incidents. It means the majority of homes in Cheshire - nearly 97% - currently have an emergency response standard between 10-21 minutes. In practice, most attendances are usually quicker.

The current response standard for road traffic collisions (RTCs) is 11 minutes. It intends to replace these with a blanket 10 minute standard for life risks - fires and RTCs.

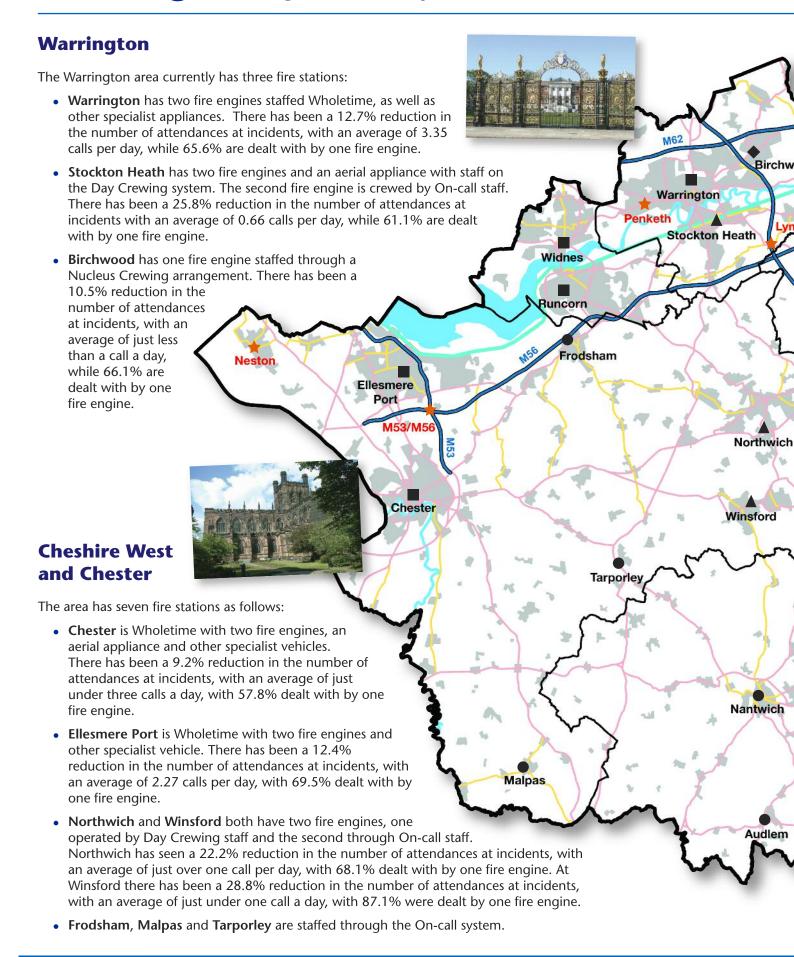

Costs and funding

It costs between £1.6 and £2 million a year to run each of the six wholetime stations with two fire engines and £1 million a year for Macclesfield which has one.

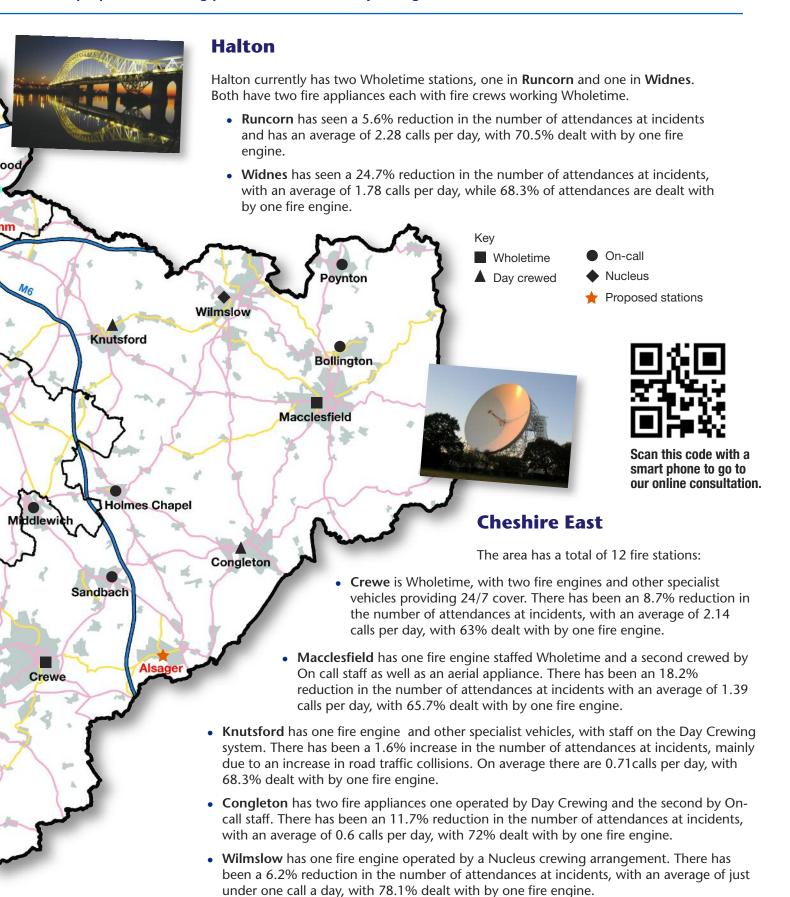

Day Crewing stations cost around £700,000 a year, nucleus crewing £740,000 and On-call approximately £150,000. To make it easier to recruit and retain On-call firefighters, options to improve pay and conditions are being reviewed, as well as the impact of allowing people to live or work more than 5 minutes from the station.

The Authority's current budget is £44.1 million. As part of the moves to tackle future funding cuts it is planning to increase its Council Tax by 3.9% a year - the maximum permitted under Government guidelines, equivalent to £2.62 in 2013-14 for an average household.

Emergency Response Review

These pages outline how fire stations in the four council areas are currently crewed. The percentage reductions / increases in attendances are based on the last three financial years. Please see the back page for details about the new proposals, including provisional annual salary savings.

Audlem, Bollington, Holmes Chapel, Nantwich, Middlewich, Poynton and Sandbach

are staffed through the On-call system.

Proposals

Warrington

Penketh – build a new Wholetime community fire station with two fire engines, the first transferred from Warrington and the second operated by On-call staff.

Warrington – move the second fire engine to Penketh. Replace the remaining fire engine with a new vehicle which combines the capabilities of a traditional fire engine and an aerial appliance or transfer the existing aerial appliance from Stockton Heath.

Stockton Heath – change the duty system from the current Day Crewing arrangement to On-call. Transfer the aerial appliance to Warrington.

Lymm – build a new Wholetime fire station near the M6/M56 junction, crewed by transferring existing Day Crewing staff from Stockton Heath and Knutsford. Use the new station as an "operational response hub" to store specialist operational vehicles.

Staffing for both the new community fire station at Penketh and new operational station at Lymm will be provided by moving crews from Warrington, Stockton Heath and Knutsford. It means salary costs would be unchanged.

Halton

Runcorn

- 1. Remove the second fire engine entirely £800,000 or
- 2. Replace it with a 'midi' fire engine used during busy periods such as bonfire night £750,000 or
- 3. Change how the second fire engine is crewed from Wholetime to On-call (24/7) £650,000 or
- 4. Change its crewing to a 12 hour day shift only£350,000 or
- 5. Change its crewing to a Nucleus Crewing model (12 hour day shift and On-call at night) £200,000

Widnes

1. Stop crewing the second fire engine with support provided by the new station at Penketh – £800,000

Cheshire East

Congleton

- 1. Transfer the second fire engine to Alsager. Change the current Day Crewing duty system to an On-call arrangement, 24 hours a day £600,000 or
- Change to a Nucleus Crewing system (Monday to Friday - 8 hour day shifts) with evening and weekend cover being provided by the existing On-call staff – £300,000

Crewe

- 1. Remove the second fire engine entirely £800,000 or
- 2. Replace it with a 'midi' fire engine used during busy periods such as bonfire night £750,000 or
- 3. Change how the second fire engine is crewed from Wholetime to On-call (24/7) £650,000 or
- 4. Change its crewing to a 12 hour day shift only £350,000 or
- 5. Change its crewing to a Nucleus Crewing model (12 hour day shift and On-call at night) £200,000

Macclesfield

- Change the current Wholetime duty system to a Nucleus Crewing system to maintain two fire engines – £350,000 or
- 2. Move from having two fire engines to one during the 12 hour night time period £500,000
- 3. Crew the aerial appliance with On-call staff at all times £100,000

Knutsford

Change the current Day Crewing duty system to Oncall. – £500,000

Cheshire West and Cheshire

Staffing for the new operational station near the M56/M53 junction will be provided by moving crews from Chester, meaning salary costs would be unchanged.

Chester

- 1. Transfer the second fire engine from Chester to a new Wholetime station near the M56/M53 motorway interchange. Use the new station as an "operational response hub" to store specialist operational vehicles
- 2. Replace the remaining fire engine at Chester with one which combines the capabilities of a traditional fire engine and an aerial appliance or maintain the existing aerial appliance and fire engine.

Ellesmere Port

- Remove the second fire engine entirely £800,000 or
- Replace it with a 'midi' fire engine which can be used during busy periods such as bonfire night – £750,000 or
- 3. Change how the second fire engine is crewed from Wholetime to On-call (24/7) £650,000 or
- 4. Change its crewing to a 12 hour day shift only £350,000 or
- 5. Change its crewing to Nucleus Crewing model (12 hour day shift and On-call at night) £200,000 or
- **6.** Transfer the second fire engine to a new On-call fire station, built in Neston £650,000

Winsford

- 1. Change from the current Day Crewing system to On-call, 24 hours a day £600,000 or
- Change to a Nucleus Crewing (Monday to Friday -8 hour day shifts) arrangement with evening and weekend cover provided by existing On-call staff – £300,000

Northwich

- 1. Change from the current Day Crewing system to On-call, 24 hours a day £600,000 or
- Change to a Nucleus Crewing (Monday to Friday -8 hour day shifts) arrangement with evening and weekend cover provided by existing On-call staff – £300,000

One-off costs for building new stations would be met from reserves and balances or by taking out loans.
